

Pumps

When your pump falters

Reverse Engineering

What do you do if a part is obsolete or on a long lead-time? Reverse engineering is one solution, ERIKS can remanufacture components utilising the latest 3D scanning technology and design software to modify, and up-grade pumping plants for improved performance and reliability.

Industries

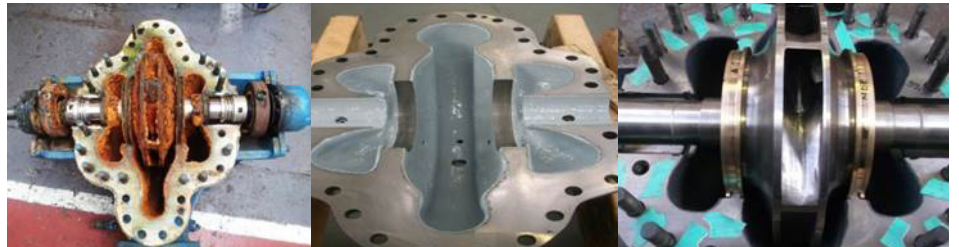

- Food and Beverage
- Pharmaceutical
- Chemical
- Water
- General Manufacturing
- Steel Industry
- Paper and Pulp Wanner
- Mining and Quarrying
- HVAC FM services

Is it the end of life or a new beginning?

Unexpected downtime and costly repairs can have a negative impact on your bottom line.

Pumps and their drives are often critical to your productivity but what will you do when they get towards the end of their life? Planning how to prevent catastrophic shutdowns just when you don't need them, that's were your local ERIKS team can help you prepare.

We are impartial because we don't decide the solution before we've assessed the problem. We might propose a replacement pump, but – if it would be more effective – we're impartial enough to recommend a repair. Or we might suggest wider system improvements to remove a possible reoccurring problem or to enhance productivity, reliability or efficiency. ERIKS technical know-how helps you find solutions that meet your objectives.

Of course, a complete service is not only about the supply, installation, maintenance and repair of the pumps themselves. It's also about ancillary equipment, such as drives and controls, sealing technology and hose technology.

Complete capabilities:

- Design
- New supply
- Spares
- Installation
- Maintenance
- Repair
- Reverse engineering
- Pump and system energy audits

Condition Monitoring

It's always best to be one step ahead of the game and with condition based monitoring you gain an insight in to the condition of critical assets, giving you that all important early warning to get a fix in place at a time of your choosing.

ERIKS have more CBM technicians working on sites across the UK flagging up risks and warning than any other company, we also offer online and installed solutions such as our retrofit Asset Guard System to match your budget.

Know-how Applied

Know-how is at the heart of everything we do, emanating from our core competence centres, radiating out through the ERIKS network of workshops and service centres to you, working directly with your technical, purchasing and logistics teams to introduce the latest innovations, working practices and legislative changes to ensure you and your teams have the support they need.

ERIKS's Planet +

Planet + is a four-part sustainable approach to a better planet for us all and a better business for you. Encompassing the Know-how Applied philosophy and structured across the four domains, it's as much about positively enhancing your productivity and profitability as it is about sustainably reducing energy use, waste, pollution and risk.

Targeting 2m Cost Savings every month

Your positive return from applying Know-how with ERIKS is in the format of a saving, be that in time, money or resources and every month ERIKS aim to help our customers find £2 million worth of savings, call your local service centre to start finding yours.
