## Obsolete Potentiometers

ERIKS support customer on repair of potentiometers

### ISSUE

A large nuclear power station was experiencing a problem. They had 50 potentiometers which were in need of repair. The customer looked to buy this through their OEM, however the rights for the product had been transferred to another company. The customer managed to purchase the rights for this product, however they now needed a manufacturer.

### SOLUTION

The customer found a manufacturer but were concerned at their lack of accreditations and quality plans and so started looking for a facilitator. One company quoted £800,000 for this job, which was considered to be excessive.

The customer's sister station had already used ERIKS for a similar application. The customer anticipates 3-4 years of support on this application from ERIKS.

### OTHER BENEFITS

- Trusted supplier with proven experience

### FURTHER COMMENTS...

ERIKS are pleased that they are able to support a customer on such a complicated application, dealing with several different stakeholders.
