ERIKS

CRIMP & SAVE

SAVE £180 PER ASSEMBLY

When a hydraulic hose fails, it's an emergency. But that doesn't mean it has to cost you an emergency call-out charge. Not when you can manufacture your own factory quality hose assemblies on the spot, in less time, for far less cost.

WHY PAY A PREMIUM?

Around 75% of the charge for an emergency call-out is nothing to do with the cost of the hose assembly. It's the premium you pay for the "privilege" of having a on-call mobile service.

Make a hose assembly in-house, and you can save around £180 per assembly. And if you do it now, you can get the crimper you need to do the job, for just £1*. That's an additional saving of around £8,499.

60 MINUTE HOSES

Most mobile hose services provide an ETA of 60 minutes from your first call. Though remember: "E" stands for "Estimated", not "Exactly."

With your own in-house crimper, you can usually manufacture your own replacement assembly in less time than it takes for the van to reach you. Which means production could be back up and running before the mobile engineer has even opened his toolbox.

FACTORY QUALITY – FASTER

The ERIKS £1 Crimper* offer gives you a choice of professional-standard Gates crimpers, ranging from a lightweight hand-operated machine to a more heavy duty power-operated crimper.

Whichever one you choose, you can be sure it's fully compatible with, and optimised to work with, the Gates hoses and couplings in the relevant Starter Kit. Starter Kits are tailored to your requirements, but will always include the most common couplings with BSP, JIC, ORFS, and metric end terminations.

Kits are also available to facilitate the crimping of the Goodall Duracrimp industrial hose range. These crimpers can also support the manufacturing of PTFE hose assemblies for high temp applications.

We also provide comprehensive Gates crimp data, so you can be sure of factory quality results every time – in less time.

ERIKS

BE TRAINED TO SAVE MONEY

TOOLBOX TRAINING

Choose an ERIKS Hose Self-Assembly Starter Kit and £1 crimper, and your engineers will be given free basic "Toolbox Training" in the use of the equipment. You'll also receive a free, simple instructional poster to position by the crimper, as a reminder of how to operate it safely.

BFPA TRAINING

Alternatively, you can invest in a full day's training by ERIKS in conjunction with the British Fluid Power Association. This not only trains your engineers in crimper operation but also covers how hose assemblies perform, how they fail, when to replace, and health and safety considerations.

STARTER KITS START HERE

With a typical saving of £180 on every self-assembly compared with an emergency call-out, you can recoup the cost of your Starter Kit in fewer than 20 breakdowns.

MC1001

Lightweight crimper for hose assemblies up to 1" wire braid.

*Just £1 with hose and couplings spend of £3,350.

MCX20

Hand-operated crimper for wire braid up to 1¼" and multi-spiral up to 1". Includes die sets storage box.

*Just £1 with hose and couplings spend of £5,950.

MCX25

Powered crimper for hose assemblies up to 1¼" (wire braid) and 1" (multi-spiral).

*Just £1 with hose and couplings spend of £7,400.
