

# Automatic lubricators simplify maintenance

## Situation

An established cement manufacturer was experiencing problems with their existing automatic lubrication system. The system was discharging incorrectly due to dust ingress, resulting in frequent bearing and motor failures.

## Solution

In areas where lots of dust and dirt is present, regular, reliable lubrication is essential. That's exactly why simatec's **simalube Automatic Lubricators** were the solution for improving reliability and significantly reducing maintenance times.

The simalube system is TÜV-tested, ATEX-Certified in all zones and complies with all International Standards. The robust, sealed construction is both dust and waterproof delivering frequent measured lubrication quantities to keep equipment operating smoother for longer, even in the hostile of conditions of cement production.
