

PROBLEM SOLVER

MAKE YOUR MAINTENANCE ROUTINE EVEN SLICKER

Problem: Newsprint and magazine producers can ill afford any downtime, other than planned maintenance schedules, and then only for a few hours per month, and once a year for major revision.

The hot and moist operating environment can bring along a whole new set of issues that can hinder the maintenance process, which can prove extremely costly.

Solution: OKS Cleaners and Anti-seize products have been adopted into the production process of a large newspaper/magazine producer, they are essential for threaded assemblies that need to be disassembled quickly to adhere to the fast and efficient maintenance schedules.

OKS Anti-Seize compounds are premium quality products developed to protect metal parts from corrosion, galling and seizing. The application of cleaning products before and after applying threadlockers, thread sealants, and anti-seize products helps ensure the best adhesion and cleanliness across the production process.
