

PROBLEM SOLVER

UP AND RUNNING IN MINUTES WITH POWERTWIST

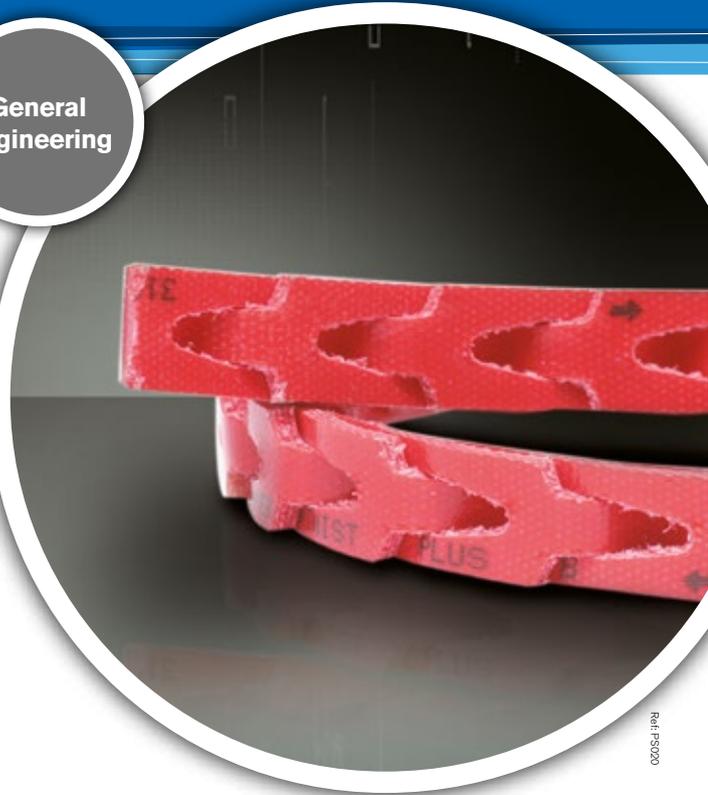

Fenner®

Problem: A large engineering company in the North of England were experiencing problems with regular belt failures, however they carried little or no stock on site and required urgent assistance each time.

Solution: Whilst the customer investigated the root cause of the failures, ERIKS suggested the customer stocked Z, A and B sections of **Fenner PowerTwist**.

This emergency belt can be made to any length in minutes with no special tools, getting your plant up and running immediately, whilst the replacement rubber belts are in transit. In this instance saving the customer 4-6 hours on downtime.
