

PROBLEM SOLVER

UNPLANNED STOPPAGES STOPPED BY WEG

Problem: Due to the high mechanical stress on the V-Belts at start up, a well known company was having to change belts in its HVAC system at regular intervals. This not only cost money for replacement belts but also down time due to maintenance stoppages.

Solution: The **WEG SSW900 soft starter** provided the solution to this problem.

Not only did this product reduce the shock loading at start up, it also acted as a protective device for the motor.

The number of belts being used has been drastically reduced and stoppages are now a thing of the past.
