

PROBLEM SOLVER

MITIGATE CONTAMINATION RISK WITH FENNER

Fenner®

Problem: Following an unannounced audit one Food and Beverage manufacturer was tasked with selecting new geared drives as their current stainless steel units did not fully mitigate the risks of contamination.

Solution: The customer selected a **Fenner Hygienic Geared Motor** - part of a new range of geared motors designed for clean applications to support regulatory compliance.

In addition to meeting compliancy requirements the customer found their cleaning process significantly quicker as the design ensures no build up of product can occur, in holes or crevices which standard geared motors can have.

Finally, the Fenner Hygienic Geared Motor has resulted in an impressive eight-fold improvement in the current lifetime for their specific application, significantly reducing their total cost of ownership.
