

PROBLEM SOLVER

THE GREENER CLEANER OPTION

Fenner®

Reliable | Trusted | Connected

Problem: A large pet food manufacturer contacted ERIKS as it was experiencing issues with the roller chains on its conveyor system.

The chains were failing after just six months and were contaminated with debris attracted by the excess oil applied to the conveyor.

Solution: Following technical discussions, the **Fenner® PLUS lubrication-free chain** was suggested. Utilising sintered bush chain technology, which negates the need for pre-lubrication, it also reduces the risk to personnel as they don't have to climb into machinery.

100m were trialled and over a year later, are still in full working order, with further chains being fitted.
