Experience Savings with Automatic Lubricator

ERIKS Lubrication Plan Delivers Cost Savings by Alleviating Manual Lubrication

ISSUE

An ERIKS UK customer was experiencing issues regarding the lack of lubrication to conveyor bearings and motors.

With an upturn in the recycling sector and a shortage of workforce, ERIKS were asked to utilise our expertise and provide a solution to lubrication issues.

SOLUTION

A site survey was undertaken of the critical plant and a solution identified using the Simalube Automatic Greasing Product.

The local ERIKS engineers worked alongside the Lubrication Product Specialist to provide a complete turnkey installation solution for the customer on the problem they were facing.

ERIKS put forward a lubrication plan to ensure all identified components are correctly lubricated. The plan contains locations, time of fitting and date to be replaced. By utilising the plan ERIKS are taking ownership of the assets ensuring the equipment is fully lubricated at all times.

OTHER BENEFITS

- Reduced Maintenance Time
- Improved Reliability
- Cost Savings by Alleviating Manual Lubrication
- Environmental Compatibility
- Extended Bearings & Motor Life
- Wide Range of Lubricator Sizes (from 15ml to 250ml)
- ATEX Approved

FURTHER COMMENTS...

Our customer are pleased with the project provided by ERIKS and ERIKS will continuously monitor the lubrication levels and provide answers to any problems that arise.
