

# UNI-CHAINS® MODULAR BELTING

## FRESH SOLUTIONS FOR INDUSTRIAL BAKERIES

**EASIER  
PRODUCT  
RELEASE, LESS  
WASTAGE**

**When dealing with dough, the uni M-QNB NS Modular Belt is the non-stick conveying option that lets your productivity rise.**

**Designed to limit surface contact and promote reliability, the uni M-QNB NS constitutes an optimum choice for mixing and handling operations with sticky dough.**

The NS surface provides non-stick properties with a reduced contact area, which coupled with the pivoting belt hinges, provides an easier product release compared to competitors. An integrated belt locking pin also allows for easy maintenance access.

### Securing your uptime

Precise socket engagement matched with the positive sprocket drive of the uni M-QNB NS delivers reduced slippage and greater consistency of drive – securing your uptime.

Utilising these advantages, end users can expect a belt that lasts 4 – 6 times longer than a PVC option.

**With your conveyor, it should never be make or bake.**
