

PROBLEM SOLVER

PROTECTING YOUR PRINTING PRODUCTION

LOCTITE®

Problem: Newsprint and magazine producers can ill afford any downtime, other than planned maintenance schedules, and then only for a few hours per month, and once a year for major revision.

The constant vibration of the printing process can loosen threaded joints across the whole operation and the costs involved for any downtime - particularly unplanned - can incur high financial penalties.

Solution: LOCTITE threadlockers, thread sealers and flange sealing products have been in use at leading magazine/newspaper producer, during which time there has been no unplanned downtime or failures.

LOCTITE threadlocking products prevent self-loosening and prevent loss of clamp load due to vibration and shock loads. They are easy-flowing liquids which completely fill the gaps between mating threads. LOCTITE thread sealants, available in liquid or stick form, prevent leakage of gases and liquids on metal pipes and connections, when fully cured, they seal to the burst strength of most pipe systems.
