

PROBLEM SOLVER

HAND HYGIENE MADE EASY FOR MOBILE WORKERS

Problem: Keeping hands clean and protected when access to washrooms, skin care products and even running water is restricted, can be challenging. Yet maintaining workers' hand hygiene and skin health is vital.

80% of all infections are transmitted by hands¹, in addition, up to 40% of workers will suffer a skin issue at some point in their working life², so fit-for-purpose skin care for mobile workers is essential. It not only helps safeguard against the spread of germs, but also occupational skin disorders, thus helping maintain the health of employees and productivity of the organisation, reducing costs and absence due to sickness.

Solution: **Deb's Mobile Skin Safety Cradle** is a simple 3-step solution to enable protective skin care, hand washing and sanitising whilst on the move. This compact system, which doesn't require water, fits neatly inside vans and work cabins.

The protective cream protects against oil and water-based contaminants, it's moisturising and is also effective against Weils Disease. The hand cleaner removes oil, grease and grime and the sanitiser rapidly disinfects, killing germs and bacteria.
